Slat mill/carpet mill/ treadmill.

Kennel or owner items kept and use with active working dogs and specific condition their bodies for whatever purpose.

Using such apparatus become especially questionable and frowned upon today – 2019 – then more so if it an APBT if you keeping and conditioning APBT working dogs.

This are not in the least as said to be – but if you own it ... or been using it for conditioning and exercise you will be "stamped and sealed" as an animal abuser and charged for cruelty to animals by "some" ... could make the "authorities" make you out to be a dog fighter – and then you have to prove the opposite - I still love my APBT's.

Let's take a look and talk about what is "thought" to be dog fighting paraphernalia and what precisely the items are and then for what precisely these items are used if you are a dogman and keep APBT. Then having and using these items as aids in exercising and conditioning the APBT as working dog and why using these "paraphernalia" does not make you or anyone else a dog fighter.

All these "paraphernalia" APBT fanciers keep and use are great exercise and conditioning tools.

The slat-mill, tread mill and carpet-mill are powered by the **DOG**.

If the dog walks/runs, it moves with the dog.

If the dog stops, it stops.

The dog has control over the slat-mill and the carpet-mill.

The dog can choose how fast it wants to run, whether the dog wants to stop, etc.

Electric treadmill – tread mill – same as humans use in the gym or at home.

The walking or running speed of the electric treadmill is controlled by trainer depending on the fitness of the dog in training – just as humans do at the gym with their trainer at hand and the level of fitness at the time

Some dog trainer do not like the electric treadmill because such a mill is not powered by the dog.

Looking at the slat mill.

With this ... the active dog can clearly enjoying themselves greatly and the slat mill offer just that and then your APBT is not on leash in the street or dog park where other dogs or your dog or other animals can cause any problems for each other.

Like said above, running the slat mill and carpet mill under supervision the dog can start, slow down and stop by themselves at any time they wants - no forcing is shown here. And running the electric tread mill under supervision hold no problem for the dog to ever get hurt.
