Electric tread mill.

The slat mill & carpet mill is different because it's powdered by the dog themselves.

The difference from the carpet, slat mill is the treadmill isn't powered by the dog.

The electric treadmill to be used only under personal supervision.

There are several motorized dog treadmills on the market these days. Motorized mills do offer some advantages over carpet mills.

They are quieter, easier for dogs to run/walk on (helps with older dogs), and you do not have to replace the belt as often.

Some models offer adjustable incline which helps increase the difficulty.

If you want your dog to walk for shorter periods but still get a good walk in adjusting the incline is a killer feature to have.

Going up in speed need careful consideration – you will know your dog level of fitness - do this under personal supervision so you can stop the mill any time you should think fit because it “can” be dangerous to the dog otherwise.

The electric treadmill also does not have the same benefits like the slat-mill and carpet-mill does.

A dog is not being forced to walk on the treadmill it is and exercise effort to get your dog fit – in the safety of your yard.
